

REFLECTIVE BUBBLE INSULATING POUCHES

WITH SELF-SEAL LIP CLOSURE

Reflective Bubble Insulating Pouches are an inexpensive packaging solution for applications requiring less robust protection against heat and cold. Designed to reflect radiant energy, these pouches are recommended for products more tolerant of temperature extremes and internal temperature excursions, as well as, for short duration (<24 hours) shipments. They may be used with frozen refrigerant packs for warm weather shipping and ambient refrigerant packs for cold weather shipping.

As with all packaging products, we recommend testing and evaluation to insure the packaging product selected will meet your particular requirements. KODIAKCOOLER® does not warrant or guarantee results for any packaging product and/or shipment. Providence Packaging will gladly provide samples for independent testing and evaluation.
