

REFLECTIVE BUBBLE INSULATING 3-D BOX LINERS

Reflective Bubble Insulating 3-D Box Liners are an inexpensive packaging solution for applications requiring less robust protection against heat and cold. Designed to reflect radiant energy, these box liners are recommended for products more tolerant of temperature extremes and internal temperature excursions, as well as, for short duration (<24 hours) shipments. They may be used with frozen refrigerant packs for warm weather shipping and ambient refrigerant packs for cold weather shipping.
